

Data Visualization Guide

How to Read, Interact with, and Configure Dashboard Visualizations

1. Metric Indicator Cards (KPIs)

Positioned at the top of the main screen, these cards show: Total Revenue, Total Contribution (Profit), Market Hubs, and Units Sold.

How to Read: Look for trend indicators. Units sold and total revenue should grow in tandem. Divergence indicates price compression or high costs.

2. Composed Trend Chart (Bar & Line)

Visualizes monthly revenue (blue bars) and net profit (amber line) over time.

Interactivity: Hovering reveals exact values. It helps spot seasonal peaks (e.g., high sales in Q4) and margins at a glance.

3. India Market Hubs (Geographic Map)

Renders regional distribution nodes across Indian states (e.g. Maharashtra, Karnataka, Tamil Nadu).

Visual Cues: Circle markers and popups identify hubs. The size of the marker correlates with regional sales contribution, helping highlight key geographic zones.

4. Category Mix (Donut Chart)

Shows sales split across categories (Electronics, Furniture, Groceries, Apparel, Stationery).

Strategic Action: Diversifying the donut sectors reduces reliance on a single product segment, protecting the business from category-specific drops.

5. Store Performance Breakdown

Lists stores sorted by revenue velocity.

Drilldowns: Clicking on a store in the list filters the regional map and KPI cards to reflect that store's isolated datasets.
