

Feature Documentation

Detailed Guide to CIVORA Capabilities

1. User Administration & Security

CIVORA supports secure user authentication. Register using the registration form. Passwords are encrypted with bcrypt, and session authorization uses JWT (JSON Web Tokens) with a 7-day expiration.

2. Multi-Store / Multi-Project Framework

Manage different retail outlets or business segments from a single account. Each store maintains isolated datasets, logos, and local tax settings.

3. Schema-Aware Data Ingestor

Ingest Excel and CSV files without rigid layout requirements. The system maps columns semantically, normalizes regional spelling variations, and handles numeric casting and missing values.

4. Interactive Analytics Dashboard

View trends with interactive charts, explore regional distribution on the India map, and analyze product categories via donut visualizations.

5. AI Assistant & Report Engine

Analyze datasets using natural language queries. Generate PDF reports containing summaries, SWOT analysis, and trend visualizations.
