

AI Features Guide

Overview of AI Integration, Chat Assistant, and Automated Insights

1. AI Chat Assistant

The chat interface on the dashboard allows users to ask questions about their data. It uses Watsonx Orchestrate if configured, with a local fallback for offline usage.

2. Local Summary Generation

The offline fallback uses keyword parsing to return summaries and basic period-over-period comparisons.

3. Automated Insights

During file upload, CIVORA automatically identifies key metrics, such as top regions and products, and saves a generated summary line to the database.
