

# Known Limitations & Constraints

## Overview of Technical Boundaries

### 1. Scale and File Size Limits

---

Imports are processed synchronously on the backend. Files larger than 25MB may time out. For large datasets, split files by week or region.

### 2. Schema Inconsistencies

---

Files must contain the five core columns: date, category, region, revenue, and quantity. Missing columns will cause validation errors.

### 3. Map Visualization Constraints

---

The map visualization is centered on Indian states. Regional names that cannot be mapped will default to title case and will not render on the map.
